Mockup Review

Hey Selena,

Great work on the mockup! I really like your choice of typefaces, use of color, and emphasis on images. The website looks like it will flow nicely and be easily navigable.

Here are a few things worth considering:
- I don't think the three-line menu icon is necessary if the section titles will be displayed in the toolbar. I think deleting the three-line menu icon and bringing the section titles to the left, keeping the toolbar's position fixed throughout the website, could be cool!
- On the homepage, it may make more sense to take out the second image of Beyoncé in the yellow dress. That way, it will flow from the album cover with Beyoncé's face covered to her face revealed with the album's songs.
- I think the 'background' and 'concept and themes' pages should be streamlined a bit. Right now, when I look at those pages, though I enjoy all the design elements, I am a little confused as to where to look and what to read first. It may be worth aligning the text to one side and increasing the size of the subheads to make them more readable and decreasing the size of the body text. I am open to other solutions, however.
- I really like the fact you used a lot of images. I think some of them can be rearranged within the site to look more cohesive. I also would ask to respect the integrity of the crop when possible.

Overall, it looks amazing! I am so excited to see the build. Thank you for all your hard work!
